

## Coffee Plant

The Coffee Plant or Coffee Arabica Plant is considered to one of the easiest and hardiest of house plants. The soil should be kept moist but not soggy. The leaves will become droopy when the plant needs water. Use a 1/3 cup of water and pour near the base of the plant.

The coffee plant prefers early morning sun or indirect sunlight.

Please note this advice is for coffee plants in an open environment/terrarium. Our Arabica Ecojar contains a coffee plant in a closed terrarium/ecosystem which requires no maintenance.
