

## Reindeer Moss Terrariums

Your plants arrive in plastic bags and tissue to ensure no damage occurs to the plants during shipping. Please take care in removing the packaging to ensure no damage occurs to the plants. The reindeer moss is preserved and requires no maintenance.

### **Jewel Terrarium**

Our jewel terrarium contains a Haworthia succulent, we like to call this our Zebra plant!

Your plant only requires a tiny amount of water every 1-2 months.

This plant is used to very dry conditions and thrives this way.

Please water under the leaves at the base of the plant straight into the soil. This plant likes bright light but make sure it is not placed in direct sunlight.

### **Penta Terrarium**

Our Penta terrarium contains a Echeveria

The biggest issue with the succulents is overwatering. Allow the soil to completely dry out before watering again. Water the succulent at the base of the plant, ensuring no water touches the leaves of the plant. The succulent will require more water in the summer months. Echeveria succulents like bright indirect sunlight.
