

DIY Ecosystem Instructions

1. Please remove all contents from the glass vase.
2. Remove all items from their plastic bags.
3. Ensure all compost is moist within their pot(s) before planting.
4. Open the bag of compost and pour into bottom of the glass. (This contains activated charcoal and can be slightly messy-please wear gloves if you prefer not to get dirty!)
5. Using your hand dig out space(s) in the compost you plan to plant the plant(s).
6. Remove the plant(s) from the plastic pot and place firmly in the space you have created for them.
7. Press the soil around the plant(s) so it is compact.
8. Once you are happy with the arrangement of your plant(s) place the moss on the surface around the plant(s).
9. Using the tissue within the packaging wipe any excess compost from the glass.
10. Replace the cork lid
11. The ecosystems are self sufficient. It does not require watering.
12. Place in indirect sunlight
13. If excess condensation occurs please remove the cork/kilner lid and let this disperse before replacing the lid.
14. Rotate your ecosystem occasionally.
15. Enjoy!
