

Air Plant Care

Air Plants are found from rainforests to jungles to deserts and from mountain regions to sea level!

Bright light is best if at all possible. Minimal care is required as they are tolerant of a variety of conditions.

Air Plants need to be watered approximately once a week as they do not have a root system. Place in a pot of water for a couple of minutes. Please ensure all excess water is shaken out after watering as you do not want the base of your lovely air plant to rot.
